ACCESS MANAGEMENT AND EXECUTION

2

ABSTRACT

3 Provides access management methods and systems wherein
4 privacy needs are taken into consideration. An example
5 access management system of this invention includes an
6 authorization engine, which controls access to a registrant
7 database storing registrant data including privacy data of a
8 registrant and controls the access to the registrant
9 database by use of a given privacy policy and by use of
10 condition data designated by the registrant. The authoriza-
11 tion engine includes an authorization judgment unit, which
12 decides an access type from an access request received from
13 outside and concerning the registrant data, controls refer-
14 ence to the registrant database based on the access request
15 by use of access authorization data to be decided prior to
16 the access request regarding the access type.
